

LAMINATE WEB
ABSTRACT OF THE DISCLOSURE

5 A laminate web is disclose, the laminate web comprising a first web, a
second web joined to the first web at a plurality of discrete bond sites; and a third
material disposed between at least a portion of the first and second nonwovens.
The third material is apertured in regions adjacent the bond sites, such that the
first and second nonwoven webs are joined through the apertures. In one
10 embodiment an apertured laminate web is disclosed, having a first extensible web
having a first elongation to break, and a second extensible web joined to the first
extensible web at a plurality of bond sites, the second extensible web having a
second elongation to break. A third web material is disposed between the first and
second nonwovens, the third web material having a third elongation to break
15 which is less than both of the first or second elongations to break. In a further
embodiment, an apertured laminate web is disclose, having first and second
extensible webs being joined at a plurality of discrete bond sites and a third
material disposed between the first and second nonwoven webs. The first and
second nonwoven webs are in fluid communication via the apertures and have
20 distinct regions being differentiated by at least one property selected from the
group consisting of basis weight, fiber orientation, thickness, and density.
